III.	Increasing Consortium Purchasing.....	7
IV.	Improving the Competitive Bidding Process.....	12
V.	Conclusion.....	16

I. Introduction

The Florida Department of Management Services (DMS) Division of Telecommunications (Division) respectfully submits these initial comments in response to the Notice of Proposed Rulemaking to modernize the Universal Service Schools and Libraries Program, commonly referred to as “E-rate.”¹ Florida’s official State E-rate Coordinators reside within the Division. In addition to providing E-rate assistance to all eligible Florida schools and libraries, the coordinators are responsible for filing E-rate applications for services purchased by schools and libraries from Division state master contracts for which the Division is the billed entity.

The Division serves Florida government by providing voice, data, and conferencing services at the enterprise level under the brand name SUNCOM. The Division’s goal is to reduce costs and minimize unnecessary usage of telecommunications services by State of Florida agencies. It achieves this by leveraging economies of scale, volume discounts, reducing vendor costs and risks, pooling services, and providing focused expertise to obtain the best overall value to the state. Using product design, cost accounting techniques, and a robust inventory/billing system, The Division brings transparency, accountability and incentives to motivate and empower government customers to save.

These comments provide data regarding current broadband speeds utilized by Florida schools, address questions posed in the NPRM regarding consortium purchasing and state master contracts, and explain Florida state procurement laws.

¹ *Modernizing the E-rate Program for Schools and Libraries*, WC Docket No. 13-184, FCC 13-100, Notice of Proposed Rulemaking (released July 23, 2013) (hereinafter referred to as “NPRM”).

II. Requests Related to Data Collection

In paragraphs 22, 23, and 24, the Commission seeks comment on the connectivity metrics proposed by the Obama Administration in its ConnectED initiative and the State Education Technology Directors Association (SETDA). The Division believes that an across-the-board bandwidth target for all schools may not be necessary. For example, many elementary schools may not need the same amount of bandwidth as middle or high schools because of the likelihood of more technology use by older students. While most schools will require increased bandwidth to meet mandatory online testing and assessment requirements, not all schools will have the need or the wherewithal to incorporate technology into every classroom within a specified timeframe. In addition to having the very real problem of securing the resources to purchase all of the necessary technology, many schools face the challenge of having instructors who can effectively incorporate the technology into their day-to-day instruction.

The Commission asks in paragraph 24 how much capacity schools currently use. Attachment A contains bandwidth data for Florida K-12 school districts that was compiled for the Florida legislature during the 2013 legislative session. Column E indicates the range of bandwidth speeds for each school. Column F is the minimum bandwidth purchased or used by each school and column G indicates the minimum bandwidth that school would need to meet a 100 Mbps per 1,000 students standard. Column H presents, for schools not meeting the standard, the amount of bandwidth deficiency for that school. This data indicates that 44 percent of Florida schools meet the 100 Mbps per 1,000 users target and 4 percent of Florida schools meet the 1 Gbps per 1,000 users target.

The Florida Department of Education (DOE) recently sent a survey to K-12 schools asking for detailed information about their technology use, including a request for data regarding

bandwidth usage. The deadline for responses to the survey is November 27, 2013, but the results are not usually released prior to January of the following year. The Division will be happy to file the results of the survey with the Commission when they become available.

Paragraphs 30 and 31 of the NPRM ask for comment on how the Commission should best collect data on the speed and quality of school and library connections. The Division recommends that a column be added to the Form 471 Block 4 worksheet that asks for the actual bandwidth speeds allocated for each of the entities listed in worksheets that are referenced in Block 5 for Internet Access funding requests. Alternatively, the Division recommends the information be required to be included in the Item 21 Attachment for Internet Access funding requests. In either case, the online Form 471 Block 4 worksheet or Item 21 Attachment would need to be revised to allow for a listing of entities and associated bandwidth speeds. Because the Form 471 Block 4 worksheet is publicly available, it is the Division's preferred location unless the Commission decides to make the Item 21 Attachment information public. Collection of this data will allow the Commission to assess the progress of E-rate applicants in meeting its chosen bandwidth targets.

Paragraph 30 asks if the Commission should use the National Broadband Map to estimate what fraction of schools and libraries have access to at least one broadband provider within the same census block offering broadband at speeds that meet its proposed performance metrics. Florida developed a broadband map that can be used for this purpose. It can be found at <http://map.broadbandfla.com>. An example of the information available on the Florida interactive broadband map is shown below.

III. Increasing Consortium Purchasing

In paragraph 180 of the NPRM, the Commission seeks comment on whether it should adopt additional incentives or mechanisms to facilitate the use of consortium purchasing in the E-rate program. In particular, the Commission is interested in ways that consortium purchasing can drive down prices and otherwise benefit applicants and the E-rate fund. In paragraph 181, the Commission asks whether there are legal, geographic or other barriers preventing certain schools and libraries from taking advantage of consortium purchasing.

State master contracts that are available to all governmental agencies are a form of consortium or bulk purchasing because they are the result of price negotiations based on the assumption that many entities will purchase off of the contracts. Enterprise procurement through state master contracts not only offers terms better than many schools and libraries could negotiate themselves, it also can offer terms that are often better than their representative state agency could negotiate on their behalf. For example, the Florida Information Resource Network (FIRN) was created in 1982, “with a primary mission to serve as a data communication transport vehicle for Florida’s public education system and to provide equitable data network connections for every school district, community college, and university.”² In 1984, the Florida Legislature authorized use of FIRN for libraries.³ The original FIRN contract was negotiated by the Division as part of its SUNCOM service offerings available to all governmental agencies in Florida. In

² Florida Department of Education, *A Report to the Joint Library Planning Committee from the Technical Support Workgroup in Response to Section 81 Proviso, 2009 General Appropriations Act*, November 12, 2009, page 52.

³ *Id.* At 17.

August of 2008, in anticipation of the expiration of the original FIRN contract, the Florida Department of Education (DOE) issued a Request for Proposal (RFP) for the same services offered under the original FIRN contract. In October of 2008, the Division began a procurement process for the same services. In its report, *“Strategic Planning for Florida Governmental Broadband Capabilities,”* the Public Utility Research Center at the University of Florida found that, on average, prices for services negotiated through the DMS enterprise procurement were 40 percent less than the prices negotiated through the DOE agency procurement.⁴

Florida law provides that “school districts with 20,000 or fewer unweighted full-time equivalent students, developmental research (laboratory) schools...and the Florida School for the Deaf and the Blind may enter into cooperative agreements to form a regional consortium service organization.”⁵ Each consortium is permitted to provide a full range of services, including technology procurement, to its members. Today, there are three such regional consortia in the state: the Panhandle Area Educational Consortium, the Northeast Florida Educational Consortium, and the Heartland Educational Consortium. Together, these consortia comprise 32 of the state’s 67 public school districts plus the Florida School for the Deaf and the Blind and a few developmental research schools. Attachment C is a map showing the counties included in each of the consortiums. As is shown, the counties are some of the most rural in the state. The three regional consortia also formed the Florida Learning Alliance, Inc. with the Florida Virtual School, the nation’s first and largest online public school. The Florida Learning Alliance, Inc. is a non-profit corporation “organized as an advocate for the use of technology in Florida through the identification, development, or acquisition of products, services, and/or strategies

⁴ Public Utility Research Center at the University of Florida, *Strategic Planning for Florida Governmental Broadband Capabilities*, February 28, 2011, pages 198-199.

⁵ Section 1001.451(1), Florida Statutes.

that support educational advancement in curriculum, instruction, assessment, student and community services, and professional development.”⁶

In the 2013 Florida legislative session, the three consortia jointly developed a plan for updating technology in all member districts. The plan proposed the formation of a “consortium of consortia” that would provide continuity of programs and services that the individual districts involved would not be able to provide as effectively or economically by themselves. The plan addressed the current lack of bandwidth as follows:

Rural districts face a significant disadvantage of harnessing the power of digital learning due to the lack of financial resources and broadband services in homes, schools and communities in these sparsely populated areas. Schools, therefore, become a central hub for digital learning and often are the only option for Internet access despite rudimentary digital infrastructure. Rural Holmes County, for example, with its sparse population, has minimal access compared to large urban areas. Poplar Springs School, for example, currently operates with 3 Mbps of bandwidth; clearly insufficient to seize digital opportunities, such as distance learning, much less comply with future educational requirements.⁷

The proposal sought funding for a technology solution that would provide support for distance learning, digital textbooks, online testing, and streaming video, among other things. The plan included initial Internet Access capacity of 100 Mbps per school minimum (285 sites) with a target bandwidth of 1 Gbps per 1,000 students by 2017, in line with SETDA’s proposed targets. The budget request, a one-time cost of \$72.985 million and recurring cost of \$30.3565 million

⁶ www.floridalearningalliance.org

⁷ Heartland Educational Consortium, Northeast Florida Educational Consortium, and Panhandle Area Educational Consortium, *Rural School Technology Enhancement Request: A Survey of Essential Technology Needs of the 21st Century Small, Rural Classrooms*.

per year, also included enterprise class IT traffic management, Wi-Fi networks, device management, distance learning, cloud-based digital content, management, and licensing, and hardware upgrades.⁸ The proposal was not introduced in the 2013 legislative session, but the group is working to have it included in 2014 legislative budget requests.

The Panhandle Area Education Consortium is the Florida member of the Association of Educational Purchasing Agencies (AEPA), a national organization that procures goods and services for a combined purchasing volume of 26 states representing over 25 million students. All bids follow competitive bidding requirements. The Panhandle Area Education Consortium has been successful in procuring goods and services through this organization, but to date, the AEPA has not procured many E-rate-eligible goods or services.

The Florida Education Purchasing Consortium (FEPC) is an administrative entity created by the Florida School Boards Association (FSBA) and the Florida Association of District School Superintendents (FADSS) to enable school districts to coordinate procurement efforts to maximize their buying power.⁹ The consortium has not yet attempted to procure E-rate-eligible goods or services.

As explained above, Florida consortia of schools are legislatively authorized and depend, at least in part, on legislative budget approval for their purchases. While the three Florida regional consortia have been successful in their technology procurement efforts, other attempts at encouraging consortia procurements for technology have not yet been as successful. The complexity of the procurement processes and the desire of some districts to control their own purchases make some consortia procurements challenging.

⁸ *Id.* at 3.

⁹ Legal authority: Section 163.01, F.S. (The Florida Interlocal Cooperation Act of 1969).

Paragraph 182 of the NPRM seeks comment on whether there are consortia-friendly application processes that would minimize the administrative burden on applicants and USAC. Specifically, the Commission asks if it should prioritize consortium applications in the USAC review process and asks for ways to streamline the consortia review process. The Division believes that requiring USAC to prioritize applications by consortia as well as applications for equipment and services provided through state master contracts would provide incentive for their increased use. The Commission could reduce the administrative burden on applicants and USAC by adopting its proposal to review multiyear contracts only once in the initial year. The Division believes the one-time review should be applicable to multiyear contracts of any length and should not be restricted to three years, as long as no changes are made to the contract.

Paragraph 184 of the NPRM asks if the formation of consortia is impacted by potential disparities in discount levels. Because consortium applications contain an average of the discounts of all consortium members, some members would receive higher discounts and some would receive lower discounts than would be the case if they applied on their own, unless the consortium is comprised of only members with the same discount rate. In Funding Year 2013-14, the Division began filing the Forms 471 for state master contract services billed directly to the Division and provided to E-rate-eligible customers. Prior to that time, the customers filed their own Forms 471 for state master contract purchases. The Division analyzed the impact on each customer if it were to file a consortium application for each service. Because some customers would be subject to a lower discount rate under a consortium application, the Division decided to file a separate application for each customer.

IV. Improving the Competitive Bidding Process

Paragraph 204 of the NPRM addresses situations where no service providers respond to an applicant's Form 470. The Commission asks the following:

Are there resources available at the state or regional level that could assist these filers in finding vendors to provide E-rate-supported services at reasonable rates? For instance, we have anecdotal evidence that E-rate applicants may be unaware of state master contracts or cooperative purchasing organizations, such as the Western States Contracting Alliance, that could be beneficial to them. Should USAC post guidance on its website or take other steps to assist E-rate applicants in finding these resources? Should applicants be required to certify that they have reviewed state master contracts before selecting a vendor?¹⁰

As noted in the Introduction, the Division undertakes the procurement of telecommunications state master contracts that are available for school and library use. The Division's website contains a list of E-rate-eligible contracts and related pricing information.¹¹ Although the information is publicly available, it is possible that some schools and libraries in Florida are not aware of the Division's contracts. As such, it would be helpful if USAC provided information on its website regarding the existence of a state's master contracts and where they can be found. USAC could also include information in its applicant training sessions that directs attendees to where they can find specific state master contract information on its website. Regarding a requirement that applicants certify that they have reviewed state master contracts before selecting a vendor, actual review of entire contracts might be very time-consuming and may not

¹⁰ NPRM at 55, para. 204.

¹¹ www.dms.myflorida.com/suncom

be necessary if a description of services and related pricing information is otherwise available; however, applicants should, at a minimum, be required to indicate **if** a state master contract exists for the service and if so, whether or not they have considered the contract.

Paragraph 206 of the NPRM asks whether the Commission should exempt certain applications or applicants from the E-rate competitive bidding rules on the basis that they are complying with state and local competitive bidding requirements. Paragraph 207 addresses state master services agreements (State MSAs) for E-rate-eligible services. The Commission asks whether applicants should be allowed to purchase off of a State MSA without the applicant or the State MSA having gone through the E-rate competitive bidding process. The Commission also asks if, in order to be exempt from E-rate competitive bidding processes, applicants should be required to choose the lowest price offering if a State MSA has several options for the same or functionally equivalent products or services at different prices.

The Division appreciates that current E-rate rules and procedures allow schools and libraries to choose goods and services from state master contracts and cite the associated state contract Form 470 on their Forms 471 without having to conduct their own procurement processes if the state conducts a competitive procurement process. This policy recognizes that states generally are required to undertake competitive procurements that presumably result in the most cost effective offerings. On the other hand, schools and libraries are allowed to undertake their own procurements and consider a state master contract as a bid, which enables them to explore options in addition to what is offered under state master contracts.

The State of Florida has myriad procurement laws and rules aimed at ensuring that procurements are fairly and competitively bid and improper procurement behavior is avoided.¹² Chapter 287.057, Florida Statutes and Chapter 60-A-1.002, Florida Administrative Code govern the purchase of commodities and contractual services, and require different practices based on the value of the procured goods and services

Florida's procurement laws and rules address the circumstances under which various contracts must be evaluated, evaluation criteria, restrictions on communications between the Division and vendors during procurement periods, conflicts of interest, contracts, and other issues addressed by E-rate procurement rules and procedures. While some Florida provisions are not exactly the same as Commission rules and USAC procedures, the Division believes Florida procurement policy meets the intent of the Commission's E-rate procurement policy.

In addition to the above statute and rules, employees of the state of Florida are governed by a statutory Code of Ethics.¹³ The code addresses issues such as doing business with one's agency, unauthorized compensation, the receipt and reporting of gifts, restrictions on post-employment activities, nepotism, financial disclosure requirements, and whistle-blower alerts. The gift restrictions are very similar to those in the E-rate rules, which reflect federal agency gift rules. Effective January 4, 2011, Division employees also must adhere to an Executive Office of the Governor Code of Ethics that incorporates and exceeds the statutory code of ethics.¹⁴ In particular, the Governor's code imposes gift restrictions that are more stringent than those contained in the statutory code. For example, while the statutory code generally allows procurement employees to accept gifts valued at over \$25 but not exceeding \$100 from certain

¹² Chapter 287, Florida Statutes; Chapter 60A-1, Florida Administrative Code.

¹³ Chapter 112, Part III, Florida Statutes.

¹⁴ *Executive Office of the Governor Code of Ethics*, Office of the Governor Executive Order Number 11-03, January 4, 2011.

individuals or entities, the Governor's code expressly prohibits the acceptance by employees of any gift from anyone, with some limited exceptions for friends, relatives, food/refreshment provided at events and charitable contributions.¹⁵

Because the state of Florida has stringent procurement and ethics requirements that are similar to or more restrictive than the Commission's E-rate rules, requiring the Division to also comply with E-rate competitive bidding rules is essentially duplicative and imposes an unnecessary layer to the Division's complex procurement process. Generally, any agency that procures State master service agreements or master contracts and is governed by laws and/or rules similar to E-rate rules should be exempt from E-rate procurement rules. In these circumstances, schools and libraries should be permitted to purchase off of state MSAs or master contracts without either the applicant or the state going through the E-rate competitive bidding process.

Such applicants should not be required to choose the lowest price offering if there is more than one offering for the same or functionally equivalent product or service at different prices, as the lowest price offering may not meet all of an applicant's needs or may not be the most cost-effective solution for an applicant's circumstances. In this scenario, USAC could continue to require applicants to conduct "mini-bids," which do not require applicants to conduct a formal procurement, but do require them to be able to demonstrate the criteria used to evaluate various offerings and explain how they decided on their chosen goods and/or services.

¹⁵ *Id.* at 8-10.

V. Conclusion

The Division applauds the Commission for undertaking this much needed effort to modernize the E-rate program. The program has been a critical catalyst for the transformation of education in the United States and for making technology available to all Americans through our community libraries. Now is the time to take this very successful program to the next level by address current and future technology needs in schools and libraries. The Division hopes the information provided herein is helpful and asks that the Commission issue an Order in this proceeding consistent with the recommendations concerning state master contracts and E-rate procurement rules contained herein.
